Time

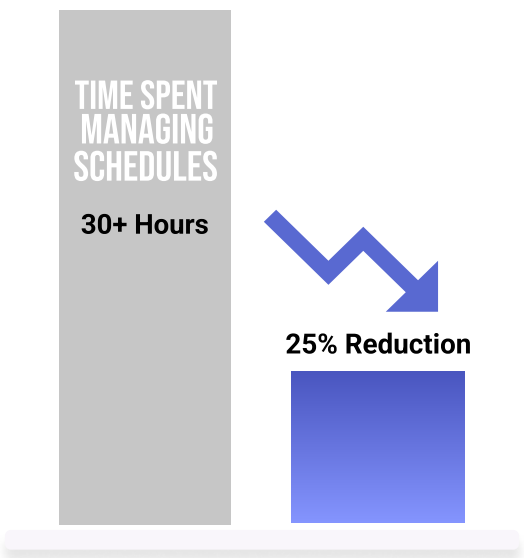
# 520 Hours Saved Annually: East Lampeter Police Streamlines Scheduling

*East Lampeter Police*
CASE STUDY

## CHALLENGE ONE

**Manual processes created duplicate work**

The department spent 20–30 hours a week managing spreadsheet schedules. Frequent updates had to be made manually, often requiring duplication of work. Any changes meant printing new versions and re-distributing them physically.

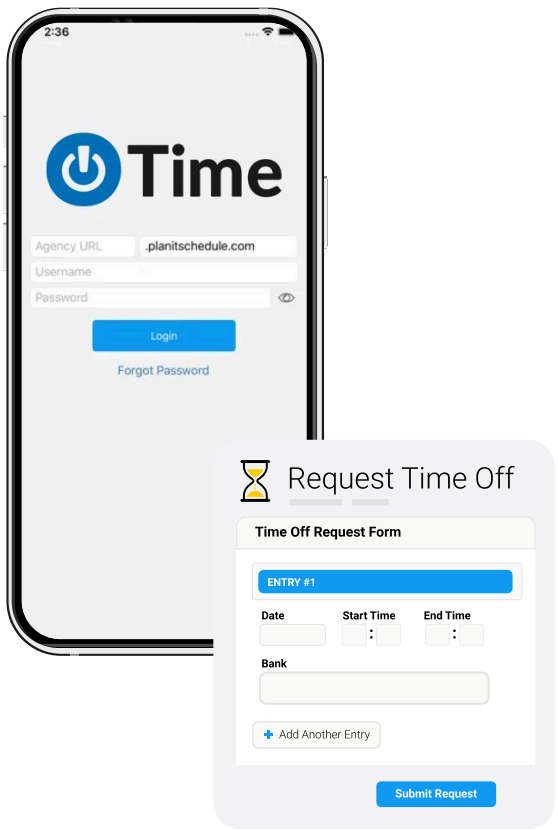


**Saving 10+ hours per week.**

## OUTCOME

**Automated schedules saving them time**

PowerTime allowed real-time schedule updates that eliminated duplication and printing. Chief Zerbe can now build schedules for the whole year and adjust them quickly, reducing time spent on scheduling by over 25% — saving 10+ hours per week.



## CHALLENGE TWO

**Limited visibility of the schedule**

Officers had to call in or check a printed schedule in the squad room to confirm shifts, court dates, or time off. Shift trades and requests weren't transparent, making planning difficult and leading to communication gaps.

## OUTCOME

**Anywhere access keeping everyone in sync**

Officers can now view schedules, make requests, and check availability from any device. The web-based platform centralizes communication and automates notifications — improving visibility, reducing confusion, and enhancing responsiveness.

> *Officers don't have to call in to verify schedules, hearings, court dates, etc. – these are **all available on their phone.**"*

**Chief Zerbe**
